(54) Title: SECURITY SYSTEM FOR AN AUTOMATED TELLER MACHINE

(57) Abstract

The present invention discloses a security system for monitoring an Automated Teller Machine (ATM). The system includes a plurality of cameras at the ATM arranged to capture at least one image of a person initiating a transaction on the ATM. Storage media is located at the ATM for digitally storing images captured by the cameras. The system is configured for digitally transferring images to the storage media and to at least one remote location wherein the images are viewable at the remote location. In one aspect, the system provides for random access to and searching of the image data stored at the ATM. In another aspect, the information is stored at the ATM in a way which provides for increased searching efficiency. In still another aspect, the system may include a security section having cameras which capture images or provide indications responsive to one or more events other than the initiation of transactions.
